Good morning teachers, student & parents, yesterday we had an awesome time at Macquarie University. Young Einstein students and the Robotics group got to do some amazing activities at Macquarie University. We got to go to the garden and see some beautiful flowers and ancient trees, we got some worksheets to do. After that we had a great time doing some art. This is my fantastic drawing. We saw a drawing of the seven sisters (a dream time story). As some students know this wasn’t the order of the activities. It’s because I kept the 2 best ones for the end. Next we got to see 2 robots. There was a small one and a big one. The small one took 2 days to get built and they spent $700, it throws balls. The big one took 6 weeks to get built and it throws Frisbees (5-6 metres high), it can hold 4 freebies at a time. Did you know that it competed in a competition? So now you’re going to find out what the best part was. It was the telescope! So we got to see the red fiery sun. We saw the spots and the flares. Did you know that the flares are bigger than the Earth? At the end we got a goodie bag with some awesome things inside it. We got to play in the huge backyard. Me and my friends listened to some music on the bus. The bus was a coach, IT WAS HUGE!! I would like to thank Mrs Lim & Mrs Clift.

Thank you
